## EDUCATION

---

### Virginia Tech, Blacksburg, USA

PhD, Computer Science

March 2025 - Present

Master of Science, Computer Science; GPA: 3.9/4

Aug 2022 - Feb 2025

### Indian Institute of Information Technology (IIIT) Guwahati, India

Bachelor of Technology, Computer Science and Engineering; GPA: 8.6/10

July 2017 - May 2021

## WORK EXPERIENCE

---

### Graduate Research Assistant, Virginia Tech

Aug 2022 – Dec 2024

- Developed a **novel zero-shot approach** for **Scene Graph Relationship Prediction** using **VLMs**, reframing Predicate Classification as an **MCQA task** and surpassing trained baselines by at least 7% for **balanced relationship prediction**. Designed an **open-ended relationship generation framework** to eliminate answer-choice biases and improve contextual understanding.
- Performed comparative analysis of **Weakly Supervised Semantic Segmentation** approaches, highlighting the superiority of saliency maps over CAMs and introducing stochastic aggregation to enhance saliency effectiveness.

### Augmented Reality Developer Intern, Amply

Dec 2019 - Mar 2020

- Developed interactive Augmented Reality (AR) portals using AR-Core in Unity3D, enabling secure interactions with virtual objects to create immersive AR tours for client companies

### Virtual Reality Developer Intern, IIT Guwahati

May 2019 - Jul 2019

- Designed and developed an interactive Virtual Reality (VR) tour using Unity3D, focusing on smooth navigation within the virtual environment to enhance user experience (UX) in VR.

## PROJECTS

---

**SEAL-0 (Search Engine Augmented Language) (Ongoing):** Creating a dataset of complex questions that challenge state-of-the-art LLMs. This project evaluates how these models handle queries requiring up-to-date knowledge and complex reasoning by leveraging search engines for real-time information.

**Evaluating Model Reasoning and Hallucinations in Medical LLMs:** This project investigates factual error propagation in open-source medical LLMs (e.g., BioMistral, Asclepius) and documents their datasets for transparency. By highlighting performance variations, it aims to guide the development of safer, more reliable language models for healthcare. [GitHub](#)

**Visualizing the Spotify Soundscape:** This project visualizes the Spotify Top 50 Tracks of 2023 through an interactive, HTML-based dashboard. Using D3.js and Plotly.js, it enables dynamic, data-driven exploration of each track's popularity and attributes. [GitHub](#)

**Predicting Popularity of Flickr Images (ICIP 2021):** This project predicts how popular a Flickr image will be over 30 days, even before it's uploaded. By analyzing user and image social features alongside image visuals, it models engagement based on two factors: scale and shape. Using these factors, the method forecasts the daily engagement sequence. See publication [P4]. [GitHub](#)

## PUBLICATIONS

## SKILLS SUMMARY

---

**Languages:** Python,  $\LaTeX$ , C++, Shell

**Frameworks/Tools:** PyTorch, TensorFlow, Keras, Scikit, OpenCV, Numpy, Pandas, Git, Unity3D, vLLM, LangChain, FAISS, OpenAI API, Hugging Face Transformers & APIs

## ACHIEVEMENTS, SERVICES & LEADERSHIP

---

**3rd Position, IEEE ICIP Image Popularity Prediction Challenge (Oct 2020):** [View Results](#)

**Reviewer:** AAAI 2024

**Teaching Assistant, Virginia Tech:** Machine Learning, Machine Learning with Big Data, Intermediate Python – Tutored 100+ students, resolved doubts, graded assessments, and enhanced understanding of complex concepts.
